

FloodSmart Analytics

Flood risk analytics for finance sector professionals

FloodSmart Analytics is designed to help clients better understand flood risk – from a single lending decision on a mortgage or insurance policy related to a property asset – all the way to the entire loan book or insurance portfolio.

Risk Reports

Per Location:
Insurance pricing
Lending decision

Portfolio Reports

Portfolio Analytics:
Understanding profile
Optimisation

Data by Peril type

Enhance existing
modelling with specific
peril data

Climate Change

Understand the
impact of future
climate risk
scenarios

All Sources

Full map and data suite
Contains UPRN data
User can add data layers

Groundwater

Groundwater specific
peril is often not
included. Explore this
risk.
